the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.1 billion to 1.4 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are having children at a younger age. This is due to a number of factors, including the fact that people are having children at a younger age than in the past, and the fact that people are having more children than in the past.

Another factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving infancy. This is due to a number of factors, including the fact that people are surviving infancy at a higher rate than in the past, and the fact that people are surviving infancy at a younger age than in the past.

A third factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving childhood. This is due to a number of factors, including the fact that people are surviving childhood at a higher rate than in the past, and the fact that people are surviving childhood at a younger age than in the past.

A fourth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving adolescence. This is due to a number of factors, including the fact that people are surviving adolescence at a higher rate than in the past, and the fact that people are surviving adolescence at a younger age than in the past.

A fifth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving adulthood. This is due to a number of factors, including the fact that people are surviving adulthood at a higher rate than in the past, and the fact that people are surviving adulthood at a younger age than in the past.

A sixth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving old age. This is due to a number of factors, including the fact that people are surviving old age at a higher rate than in the past, and the fact that people are surviving old age at a younger age than in the past.

A seventh factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving very old age. This is due to a number of factors, including the fact that people are surviving very old age at a higher rate than in the past, and the fact that people are surviving very old age at a younger age than in the past.

An eighth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving the very old age. This is due to a number of factors, including the fact that people are surviving the very old age at a higher rate than in the past, and the fact that people are surviving the very old age at a younger age than in the past.

A ninth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving the very old age. This is due to a number of factors, including the fact that people are surviving the very old age at a higher rate than in the past, and the fact that people are surviving the very old age at a younger age than in the past.

A tenth factor which has contributed to the increase in the number of people in the world who are under 15 years of age is the increase in the number of people who are surviving the very old age. This is due to a number of factors, including the fact that people are surviving the very old age at a higher rate than in the past, and the fact that people are surviving the very old age at a younger age than in the past.
